Montana Board of Oil and Gas Conservation Environmental Assessment

Operator: Marathon Oil Company
Well Name/Number: Brenda Hendrickson 41-17H
Location: NE NE Section 17 T31N R59E
County: Sheridan, MT; Field (or Wildcat) Wildcat
County. Sheridan, 1911, Field (of Windeat) Windeat
Air Quality
(possible concerns)
Long drilling time: No, 25-35 days drilling time.
Unusually deep drilling (high horsepower rig): <u>Triple derrick drilling rig, to drill to</u>
19,000'MD/9,608'TVD single lateral Bakken Formation test well.
Possible H2S gas production: Yes, slight chance of H2S gas, Mississippian Formations.
In/near Class I air quality area: No Class I air quality area.
Air quality permit for flaring/venting (if productive): Yes, DEQ air quality permit required under
<u>75-2-211.</u>
Mitigation:
_X Air quality permit (AQB review)
Gas plants/pipelines available for sour gas
Special equipment/procedures requirements
Other:
Comments: Drill a 19,000'MD/9,608'TVD single lateral Bakken Formation test well.
If no gas gathering system exists nearby sweet gas and/or H2S gas can be flared under Board_
Rule 36.22.1220. No concerns.
Water Quality
(possible concerns)
Salt/oil based mud: Yes to intermediate casing string hole will be drilled with oil based invert
drilling fluids. Horizontal lateral will be drilled with brine water. Surface casing hole will be
drilled with freshwater and freshwater mud system.
High water table: No high water table anticipated, in the area of review.
Surface drainage leads to live water: No, closest drainage is a pothole pond, about 1/4 of a mile
to the soutwest from this location.
Water well contamination: None, closest water well is about 7/8 of a mile to the southwest
from this location. Surface hole will be drilled with freshwater to 1820'. Surface casing will be
run and cemented to surface.
Porous/permeable soils: No, silty sandy clay soils.
Class I stream drainage: No, Class I stream drainages.
Mitigation:
X Lined reserve pit
\underline{X} Adequate surface casing
Berms/dykes, re-routed drainage
Closed mud system
Off-site disposal of solids/liquids (in approved facility)
X Other: Semi closed loop mud system to be used. Oil based invert drilling fluids will

Comments: 1820' of surface casing will be necessary to cover the base of the Fox Hills

be recycled. Cuttings will be mixed with fly ash and buried in the lined cuttings pit.

Soils/Vegetation/Land Use

(possible concerns)
Steam crossings: None anticipated.
High erosion potential: No, location requires a small cut, up to 8.5' and a small fill, up to 6.8',
.required.
Loss of soil productivity: <u>Slight.</u>
Unusually large wellsite: No, a very large well site 400'X500', single well location pad.
Damage to improvements: No, location to be restored after drilling, if nonproductive. If
productive unused portion of the drilling pad will be reclaimed.
Conflict with existing land use/values: Slight, surface use is grazing land.
Mitigation
Avoid improvements (topographic tolerance)
Exception location requested
X Stockpile topsoil
Stream Crossing Permit (other agency review)
X Reclaim unused part of wellsite if productive
Special construction methods to enhance reclamation
Other
Comments: Access will be over existing county gravel road, Choke Cherry Road. An access
road off the existing county road into this location will be built. Estimated new road length is
about 0.1 of a mile into the location. Cuttings will be mixed with fly ash and dumped in the
lined cuttings pit. Cuttings pit will be backfilled when drilling is completed. Oil based invert
drilling fluids will be recycled or hauled to a Class II disposal. Completion fluids in the reserve
pit will be hauled to a commercial Class II disposal.
pro min de imareo de la commerciar d'apposant
Health Hazards/Noise
(possible concerns)
Proximity to public facilities/residences: Closest residences are about 1 mile to the west and 7/8
of a mile to the southwest from this location. The town of Medicine Lake, Montana lies about
20 miles to the west northwest and Dagmar, Montana lies 11.9 miles to the northwest from this
<u>location.</u>
Possibility of H2S: _Slight chance of H2S, Mississippian Formations.
Size of rig/length of drilling time: <u>Triple drilling rig 25 to 35 days drilling time.</u>
Mitigation:
<u>X</u> Proper BOP equipment
Topographic sound barriers
H2S contingency and/or evacuation plan
Special equipment/procedures requirements
Other:

Comments: <u>Adequate surface casing cemented to surface with working BOP stack should mitigate any problems.</u>

Wildlife/recreation

(possible concerns)
Proximity to sensitive wildlife areas (DFWP identified): Medicine Lake National Wildlife
Refuge is about 10.5 miles to the west from this location.
Proximity to recreation sites: Medicine Lake National Wildlife Refuge is about 5.5 miles to the
west from this location.
Creation of new access to wildlife habitat: No
Conflict with game range/refuge management: No
Threatened or endangered Species: Threatened or endangered species listed on the Region 6
USFW website are the Piping Plover and Whooping Crane. Candidate species is the Sprague's
Pipit. NH Tracker website lists two (2) species of concern as follows: Burrowing Owl, and
Whooping Crane. NH Tracker website lists one (1) Potential species of concern as follows: the
Tennessee Warbler.
Mitigation:
Avoidance (topographic tolerance/exception)
Other agency review (DFWP, federal agencies, DSL)
Screening/fencing of pits, drillsite
Other:
Comments: Private surface grazing land. There may be species of concern that maybe
impacted by this wellsite. We ask the operator to consult with the surface owner as to what he
would like done, if a species of concern is discovered at this location. The Board of Oil & Gas
has no jurisdiction over private surface lands.
Historical/Cultural/Paleontological
(possible concerns)
Proximity to known sites: None identified.
Mitigation
avoidance (topographic tolerance, location exception)
other agency review (SHPO, DSL, federal agencies)
Other:
Comments: Private surface grazing land. There may be possible
historical/cultural/paleontological sites that maybe impacted by this wellsite. We ask the
operator to consult with the surface owner as to his desires to preserve these sites or not, if they
are found during construction of the wellsite. The Board of Oil & Gas has no jurisdiction over
private surface lands.
Social/Economic
(possible concerns)
Substantial effect on tax base
Create demand for new governmental services
-
Population increase or relocation
Population increase or relocation Comments: Wildcat well. No concerns
Population increase or relocation Comments: Wildcat well. No concerns

3

This will be an 19,000'MD/9,608'TVD single lateral Bakken Formation test well.

Summary: Evaluation of Impacts and Cumulative effects

No long term impacts expected from the drilling of this well. Some short term impacts will occur, but will be mitigated in time.

I conclude that the approval of the subject Notice of Intent to Drill (does/<u>does not</u>) constitute a major action of state government significantly affecting the quality of the human environment, and (does/<u>does not</u>) require the preparation of an environmental impact statement.
